GOKULAHEALTH

V2 Release Notes

Product Management Case Study | V1 → V2

Artifact	Artifact #10 — Release Notes
Product	GokulaHealth
Release	V2 — Milk-Production Record & Analysis Experience
Release Type	Planned portfolio release
Release Status	Not yet released — implementation and testing pending
Source	GokulaHealth V2 PRD, prioritization, roadmap, Figma specification and QA plan

1. Release Overview

GokulaHealth V2 is planned to improve the milk-production record and analysis experience. The V2 direction focuses on making production records easier to maintain and monthly production performance easier to understand.

This document is a planned release-notes artifact. It does not claim that V2 has already been implemented, tested, deployed or released.

2. Why V2 Was Proposed

- Manual milk-production records can make monthly calculation and analysis time-consuming.
- GokulaHealth V1 already captures daily milk-production data.
- The current production/analytics experience can be difficult to understand.
- The current experience does not provide enough useful information for quickly reviewing monthly performance.
- Initial discovery indicated that automatic monthly calculation and analysis could be valuable, but broader research is still required.

3. V2 Product Goal

Make milk-production records easier to maintain and monthly production performance easier to understand.

4. V1 → V2 Changes

Area	V1 Situation	V2 Direction
Milk production records	Daily milk-production data is captured.	Make recording and review easier and clearer.
Monthly performance	Production information is available but difficult to understand quickly.	Surface monthly total and monthly average more clearly.
Morning vs evening	Production values can be recorded.	Improve comparison and interpretation of morning vs evening production.
Analytics	Some existing analytics are difficult to interpret.	Improve readability, information hierarchy and usefulness.
Data states	Some analytics experiences may be unclear with limited data.	Provide clearer empty/insufficient-data states.
Offline workflow	Offline-first is a core V1 strength.	Preserve the core offline production-record workflow.

5. Planned V2 Scope

5.1 Included

- Morning milk-production entry.
- Evening milk-production entry.
- Saving and reviewing production records.
- Monthly total production.
- Monthly average production.
- Morning versus evening comparison.
- Improved analytics readability and information clarity.
- Offline core workflow.
- Clear handling of empty or insufficient-data states.

5.2 Deferred / Future Scope

- Broader farmer/user research and validation.
- Cloud synchronization.
- PDF reporting.
- AI-powered insights.
- Multi-language support.
- Any additional capability not validated or prioritized for the V2 MVP.

6. User-Facing Improvements

- Users should be able to enter production data with less friction.
- Users should be able to understand monthly production without manually calculating it.
- Users should be able to compare morning and evening production more easily.
- Analytics should use clearer information hierarchy and readable presentation.
- Offline use should remain available for the core workflow.

7. Product and Technical Considerations

- V2 should preserve the offline-first product principle.
- Production calculations must remain consistent with the underlying recorded data.
- The redesigned analytics should not introduce misleading values when data is missing or insufficient.
- The implementation should be validated against the V2 PRD acceptance criteria and QA test cases.

8. Testing and Release Readiness

V2 is considered release-ready only after the prioritized implementation has been completed and the relevant QA test cases have been executed.

- All critical/high-priority core workflow tests should pass.
- Milk-production data entry and saving should work correctly.
- Monthly total and average calculations should be verified.
- Morning versus evening comparison should be verified.
- Analytics readability should be reviewed.
- Offline workflow should be verified.
- Data consistency should be verified.
- Any release-blocking defects should be resolved and re-tested.

9. Known Limitations

- The current discovery evidence is limited and includes one prospective participant; broader active-user research is required.

- The V2 release has not yet been implemented or released.
- Actual test results are not yet available.
- Post-release product impact cannot be claimed until real usage or validation data is collected.

10. Release Communication

Once V2 is genuinely implemented and tested, the final release communication should summarize the user-facing improvements, important fixes, known limitations and any actions users need to take.

11. Post-Release Validation

- Collect user feedback on the ease of production recording.
- Check whether users understand monthly total and average information.
- Observe whether morning versus evening comparison is useful.
- Review analytics usability issues.
- Track relevant product metrics where measurement is available.
- Convert validated issues and opportunities into the V2.1 backlog.

12. V2.1 Direction

V2.1 should not be predetermined before validation. Feedback, testing results, usage evidence and newly identified user problems should be reviewed before deciding what enters the next iteration.

13. Agile / Scrum Release Flow

- Prioritized backlog → Sprint implementation → QA testing → Sprint Review → Release decision.
- Release feedback → Product learning → Backlog refinement → V2.1 prioritization.
- Failed or incomplete work returns to the backlog rather than being represented as completed release scope.

14. Portfolio Evidence

- Final V2 release notes.
- Completed QA spreadsheet with actual test results.
- Screenshots of the implemented V2 experience.
- Jira sprint/backlog evidence.
- Figma V2 prototype.
- Post-release feedback and V2.1 decision.

15. Next Steps

1. Implement the prioritized V2 MVP.
2. Execute Artifact #9 QA test cases.
3. Resolve and re-test defects.
4. Confirm release readiness.
5. Update this document with actual release information after release.
6. Collect feedback and prepare Artifact #11 — Feedback & Validation Report.

Document Control

Document	GokulaHealth V2 Release Notes
Artifact	Artifact #10
Owner	Bhagyashree Reddy

Status	Planned release artifact
Originality	Portfolio artifact based on the GokulaHealth V1 → V2 product case study
